Research Lab Technician

Laboratory of Angiogenesis and Cancer Metabolism
Dept. of Biology, University of Padua, Italy

The focus of our lab is to unravel the molecular basis of vascular and tumor biological processes using functional genomic approaches and, if possible, try to use these genetic insights to develop novel therapeutic strategies, and translate them into novel medicine.

Position: We are seeking an highly-motivated research lab technician to assist in lab managing and in vivo work. Characteristic duties include lab organization, database maintenance and mice husbandry.

Profile: Bachelor degree or equivalent. Good organizational and communication skills are essential. Candidates with previous experience as lab technician or lab manager are welcome but it is not essential.

Offer: You will be part of a dynamic working environment, a stimulating scientific surrounding in a international and motivated team with English as main language.
